## Mission Assurance Team

*Bowhead's Mission Assurance professionals prepare you for a real-world event in order to avoid serious consequences on your ability to provide services to your customers.*

Bowhead is an SBA-certified 8(a) Alaska Native Corporation (ANC) and eligible for Direct Award Contracts (DAC). Bowhead provides a DCAA/DCMA audited accounting system.

Additionally, Bowhead has access to OASIS SB, a new, single platform for complex professional services that allows agencies to focus on their missions rather than procurement. OASIS awardees are innovative, capable, and reliable service providers. Bowhead was awarded Pool 1, Pool 3, and Pool 4.

Bowhead's Mission Assurance team is comprised of subject matter experts who have all-hazards Mission Assurance experience and bring CMMI Level 3 maturity to all service offerings. We can transform your concerns and efforts from risk averse and costly to risk prudent and cost efficient.

### Mission Assurance

Our core risk offering is highlighted by the Analytical Risk Management (ARM) methodology. Using this systems approach to risk management we are able to deliver risk services to many problem sets and provide real-time assessments that include impact, threat, and vulnerability to establish your risk baselines. This approach can stand alone or build towards a full Risk Management Program supporting your Mission Assurance programs.

Bowhead designed and developed the new Certified Risk Management Course for the Disaster Recovery Institute International (DRII) to provide Business Continuity Professionals Risk Management training and certification for their professional growth. We currently provide DRII Certified instructors for this course via DRII throughout the United States.

Our risk-based approach supports all operations and unique missions to ensure decision makers have accurate information and data to make sound decisions.

# Mission Assurance Team

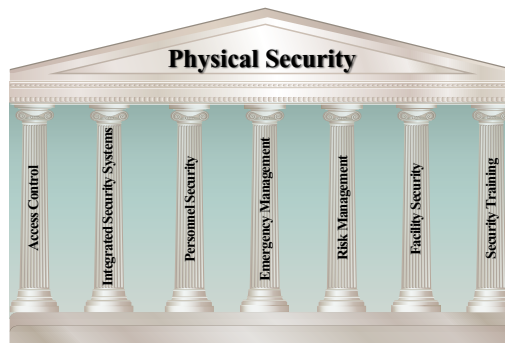

## Continuity Services

Continuity services assist government and industry partners with meeting all-hazards business continuity requirements. Our team has the experience required to support your continuity requirements regardless of technical difficulty or threat. Our analysts and planners will tailor services to your specific business needs to ensure cost-effective readiness and standards compliance.

## Security Services

Within the Mission Assurance team we provide security services such as physical security and anti-terrorism to ensure regulatory compliance and protection of your assets.

Security services are often overlooked and simply viewed as an inconvenience or annoyance to operations and missions when in reality proper security ensures your assets are safe and ready to perform to ensure you stay in business.

Our team is supported by ASIS Certified Protection Professionals. Physical Security Assessments are a holistic look into the overall physical security of buildings, facilities, and locations. Bowhead evaluates all the physical security controls in place at locations that are in scope. For example, our staff evaluates access control systems, security guards, CCTV cameras, access badges, locks, security lighting, fences and much more. The Physical Security Assessment is a non-invasive walkthrough assessment that is guided by the client's security personnel while on-site.

We know Mission Assurance services supported by core risk skill sets are imperative to ensure operations and your return on investment. The right security solutions will help you recover from an incident more efficiently and safely.
